Contents

1. Introduction
by Jørgen Kristiansen vi
2. Genome rearrangement and speciation in freshwater algae
by Terunobu Ichimura 1–17
3. Biodiversity, biogeography and conservation of diatoms
by D.G. Mann & S.J.M. Droop 19–32
4. Geographic distribution of freshwater blue-green algae
by Lucien Hoffmann 33–40
5. Biogeography of desmids
by Peter F.M. Coesel 41–53
6. Quantitative analysis on euglenoid distribution in seven regions of China
by Shi Zhi-Xin 55–65
7. Tundra stream macroalgae of North America: composition, distribution and physiological adaptations
by Robert G. Sheath, Morgan L. Vis, Julie A. Hambrook, Kathleen M. Cole 67–82
8. Biogeography of *Vaucheria* species from European freshwater/soil habitats: implications from chloroplast genomes
by Karl-Heinz Linne von Berg & Klaus V. Kowallik 83–91
9. The algal flora of the Primorsky Region, Russian Far East
by A.A. Gontcharov 93–97
10. Snow algae of the Windmill Islands region, Antarctica
by H.U. Ling 99–106
11. The Indo-Malaysian North-Australian phycogeographical region revised
by Wim Vyverman 107–120
12. Bipolarity in the distribution of silica-scaled chrysophytes
by J. Kristiansen & M.S. Vigna 121–126
13. Endemism in freshwater algae
by Peter Tyler 127–135
14. Are the impacts of events in the Earth's history discernable in the current distributions of freshwater algae
by Annette W. Coleman 137–142
15. Three Rumanian Mallomonas species (Synurophyceae), with special distribution patterns
by Leontin Ştefan Péterfi & Laura Momeu 143–150
16. Dispersal of freshwater algae – a review
by Jørgen Kristiansen 151–157
17. Biogeography of freshwater algae – conclusions and perspectives
by Jørgen Kristiansen 159–161
